

A Phase II Study of Kalvexin Oral Solution as Add-on Therapy in Children Aged 4 to 17 with Focal Epilepsy

Protocol PED-44, Amendment 1

FICTIONAL EXAMPLE PROTOCOL - FOR SOFTWARE DEMONSTRATION ONLY. All names and details are invented.

Primary endpoint: change in monthly focal seizure frequency.

4. Consent and Assent

Written informed consent from a parent or legal guardian and written assent from children aged 7 or older must be obtained before any study procedure.

Study procedures performed before written assent is obtained from a child aged 7 or older are an important protocol deviation.

Subjects who turn 18 during the study must give their own written consent at their next visit.

6. Dosing

The dose is calculated from body weight at every visit.

A dose differing by more than 10% from the weight-based dose for more than 7 days is an important protocol deviation.

9. Safety Reporting

Status epilepticus is always a serious adverse event, whether or not the child is hospitalized.

All serious adverse events must be reported to the sponsor within 24 hours of the site becoming aware of the event.
